

Auto Ticket Classification Using Flow Designer

USER ACCEPTANCE TESTING (UAT)

Date	28 September 2026
Team ID	SWTID-2026-1853
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Project Overview:

Project Name	Auto Ticket Classification using Flow Designer
Project Description	A workflow that receives support tickets, classifies them using configured conditions or rules, sets category, subcategory and priority, routes tickets to the appropriate assignment group, and sends unclear tickets to an agent review queue.
Project Version	Version 1.0
Testing Period	28 September 2026 to 28 September 2026

Testing Scope:

- Ticket description input and validation.
- Automatic classification of tickets into predefined categories.
- Display of predicted ticket category.
- Handling of valid, invalid, and empty ticket inputs.
- Model/API response and classification result.

User Stories / Requirements to be Tested:

- As a user, I can enter a support ticket description.
- As a user, I can submit a ticket for automatic classification.
- As a user, I can view the predicted category for the submitted ticket.
- The system should provide an appropriate response for invalid or empty input.

Testing Environment:

URL/Location	ServiceNow development/test instance (URL to be added)
Credentials (if required)	Not required for this document; use authorized tester credentials if applicable

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Valid Ticket Classification	1. Enter a valid support ticket description. 2. Submit the ticket.	The system accepts the input and displays the appropriate predicted category.	Not executed — record actual result after testing	Pending
TC-002	Empty Ticket Validation	1. Leave the ticket description empty. 2. Click Submit/Classify.	The system should display a validation message and should not perform classification.	Not executed — record actual result after testing	Pending
TC-003	Invalid/Unsupported Input	1. Enter invalid or unsuitable text. 2. Submit the ticket.	The system should handle the input safely and display an appropriate validation/error message.	Not executed — record actual result after testing	Pending
TC-004	Multiple Ticket Categories	1. Enter tickets belonging to different categories. 2. Classify each ticket.	Each ticket should be assigned to the corresponding predefined category.	Not executed — record actual result after testing	Pending
TC-005	Classification Result Display	1. Enter a valid ticket. 2. Run classification. 3. Observe the result.	The predicted ticket category should be clearly displayed to the user.	Not executed — record actual result after testing	Pending

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
N/A	No bug recorded yet	Complete after test execution if an issue occurs	N/A	Not tested	Update with findings after testing

N/A	No bug recorded yet	Complete after test execution if an issue occurs	N/A	Not tested	Update with findings after testing
N/A	No bug recorded yet	Complete after test execution if an issue occurs	N/A	Not tested	Update with findings after testing
N/A	No bug recorded yet	Complete after test execution if an issue occurs	N/A	Not tested	Update with findings after testing

Sign-off:

Tester Name	To be completed by tester
Date	28 September 2026
Signature	Pending tester signature

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Record actual results after executing each test case.
- Bug tracking should include severity, status, and steps to reproduce.
- Obtain sign-off from the project manager and product owner before deployment.
