

Ideation Phase

Auto Ticket Classification using Flow Designer

Date	28 September 2026
Team ID	SWTID-2026-1853
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. For Auto Ticket Classification using Flow Designer, it helps the team understand the people who create, receive, review, and process support tickets.

It is a useful tool to help the team better understand users' needs, expectations, and difficulties while handling tickets. Understanding the user's perspective helps identify the problems that the Flow Designer automation should address.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The empathy map considers what the user thinks and feels, hears, sees, says and does, along with the pain points and gains related to ticket classification.

Example:

Auto Ticket Classification using Flow Designer

The empathy map on the next page represents a support user or ticket-handling team member and focuses on the experience of classifying incoming tickets.
