

Auto Ticket Classification Using Flow Designer

1. Introduction

Project Title: Auto Ticket Classification Using Flow Designer

Team Leader :M. Vaishnavi

Team ID: SWTID-2026-1853

2. Project Overview

Purpose

The purpose of this project is to automate the classification of support tickets using ServiceNow Flow Designer. The system analyzes ticket details and automatically assigns the correct category and support team, reducing manual effort and improving efficiency.

Features

- Automatic ticket classification
- Category and subcategory assignment
- Workflow automation using Flow Designer
- Email notifications
- Faster ticket routing
- Improved ticket management

3. Architecture

Frontend

- ServiceNow Portal
- Incident/Ticket Creation Form
- User-friendly interface for submitting tickets

Backend

- ServiceNow Platform
- Flow Designer workflows
- Business Rules and Conditions

Database

- ServiceNow Tables
- Incident Records
- Category and Subcategory Data
- Assignment Group Information

4. Setup Instructions

Prerequisites

- ServiceNow Developer Instance
- Flow Designer Plugin
- Web Browser (Chrome/Edge)

Installation

1. Log in to ServiceNow.
2. Create required ticket categories and subcategories.
3. Configure dictionary dependencies.
4. Open Flow Designer.
5. Create a new flow.
6. Configure triggers and conditions.
7. Activate the flow.

5. Folder Structure

ServiceNow Components

Tables

- Incident Table
- School IT Ticket Table

Configuration

- Categories
- Subcategories
- Assignment Groups

Flow Designer

- Triggers
- Conditions
- Actions
- Notifications

6. Running the Application

1. Open ServiceNow Portal.
2. Create a new ticket.
3. Submit the ticket.
4. Flow Designer automatically classifies the ticket.
5. Ticket is assigned to the appropriate support team.
6. Notification is sent to the user.

7. API Documentation

This project primarily uses ServiceNow's built-in APIs and workflows.

Main Operations

Method Purpose

Create Create Ticket

Read View Ticket

Update Update Ticket Category

Notify Send Email Notification

8. Authentication

Authentication is handled through ServiceNow user accounts.

Security Features

- User Login
- Role-Based Access Control
- Session Management

- Secure Access to Tickets

9. User Interface

The user interface consists of:

1. Ticket Creation Form
2. Category Selection Screen
3. Subcategory Selection Screen
4. Flow Designer Interface
5. Classification Result Screen
6. Email Notification Screen

10. Testing

Testing Strategy

Functional Testing

- Ticket Creation Test
- Classification Test
- Assignment Test
- Notification Test

Performance Testing

- Response Time Verification
- Workflow Execution Validation

Expected Results

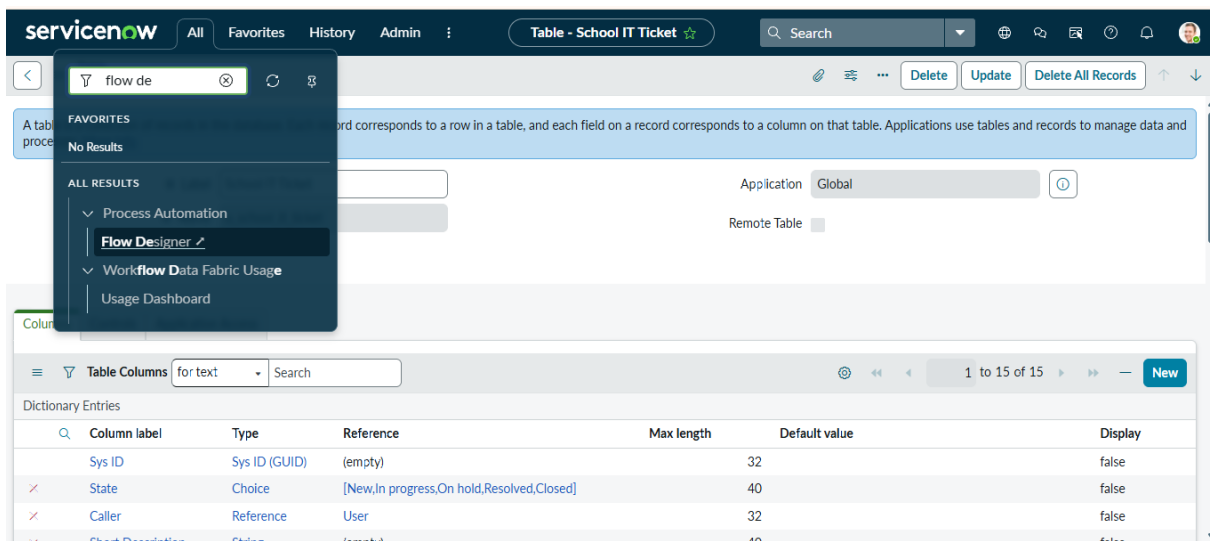

- Correct category assignment
- Successful workflow execution
- Proper email notifications

11. Screenshots

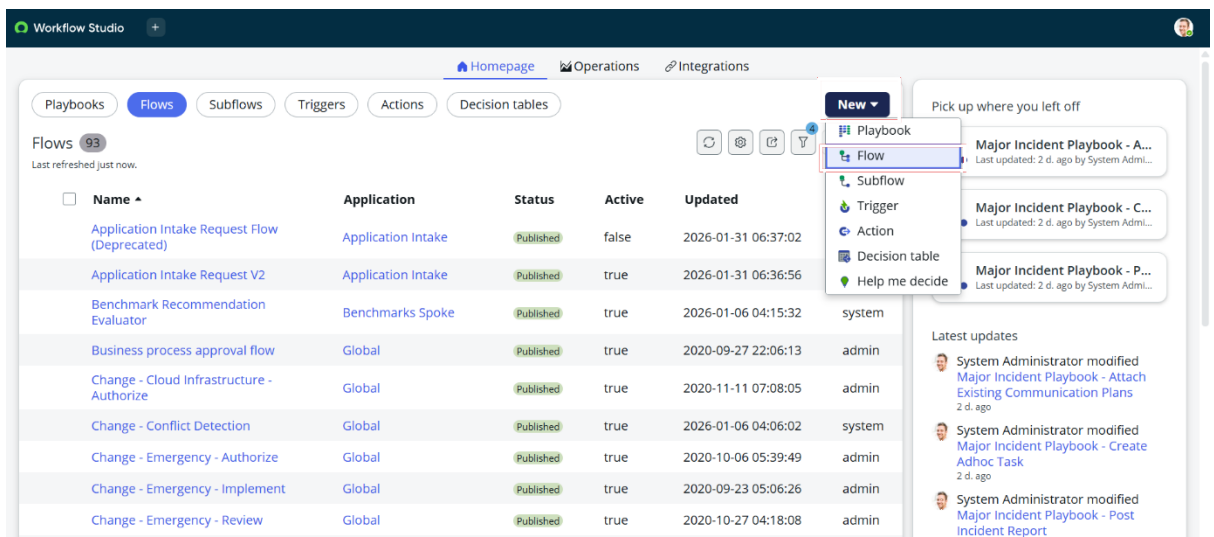

Include the following screenshots:

1. Created Update Set Details

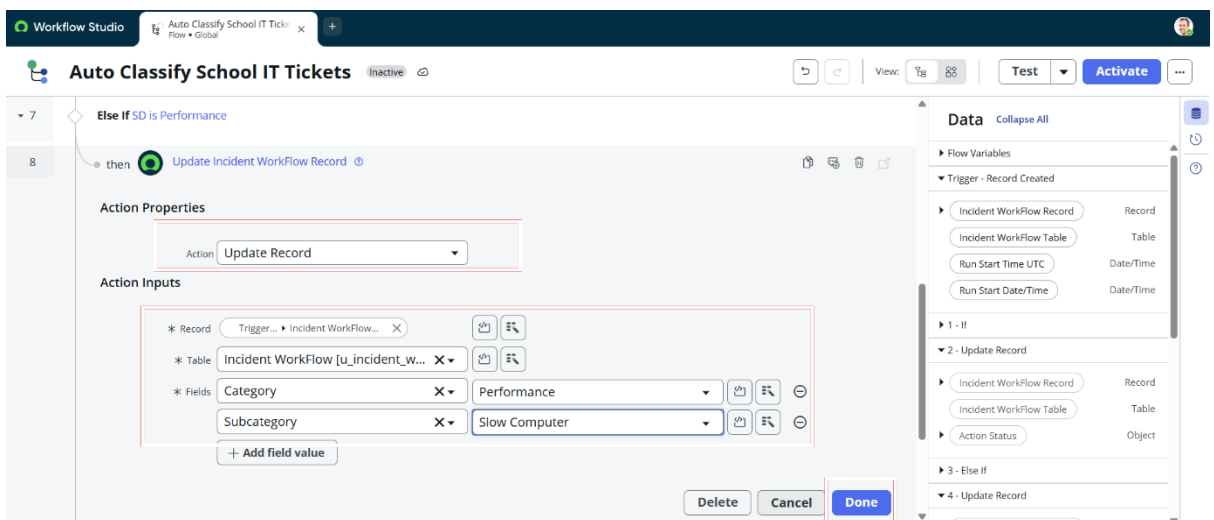

4. Flow Designer Navigation

5. Create New Flow

6. Flow Overview

7. Flow Trigger Configuration

The screenshot shows the 'Auto Classify School IT Tickets' workflow in Workflow Studio. The 'TRIGGER' section is active, showing a configuration for 'Incident WorkFlow Created where (Category is empty)'. The trigger is set to 'Created' and the table is 'Incident WorkFlow [u_incident_w...]'. The condition is 'Category is empty'. The 'Data' panel on the right shows the flow variables: 'Incident WorkFlow Record' (Record), 'Incident WorkFlow Table' (Table), 'Run Start Time UTC' (Date/Time), and 'Run Start Date/Time' (Date/Time). The 'Done' button is highlighted with a red box.

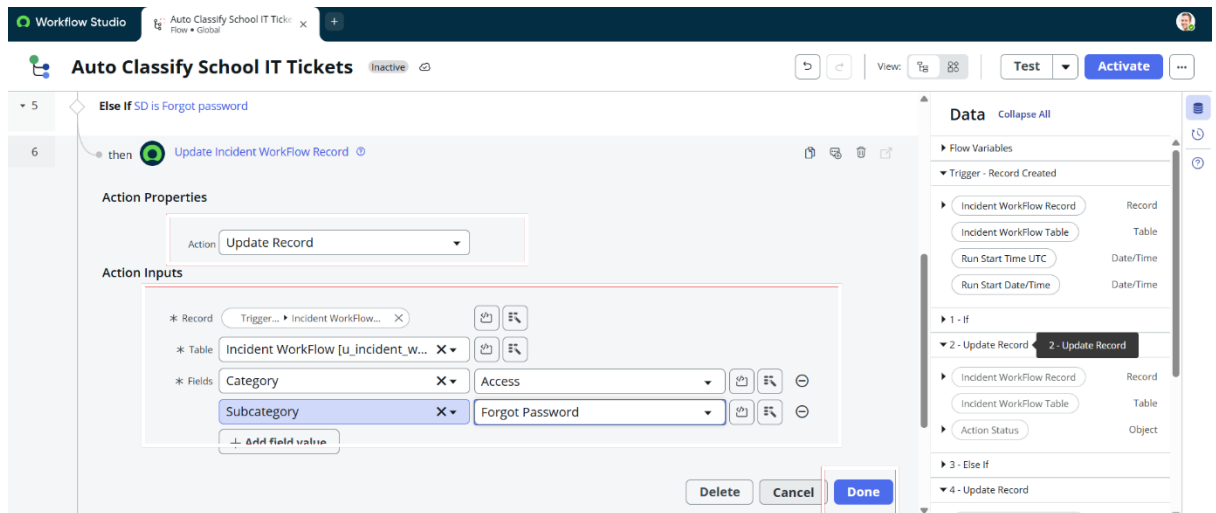

8. Wi-Fi / Network Condition Configuration

The screenshot shows the 'Auto Classify School IT Tickets' workflow in Workflow Studio. The 'ACTIONS' section is active, showing a configuration for 'SD is wifi OR network'. The condition is 'SD is wifi OR network'. The 'Data' panel on the right shows the flow variables: 'Incident WorkFlow Record' (Record), 'Incident WorkFlow Table' (Table), 'Run Start Time UTC' (Date/Time), and 'Run Start Date/Time' (Date/Time). The 'Done' button is highlighted with a red box.

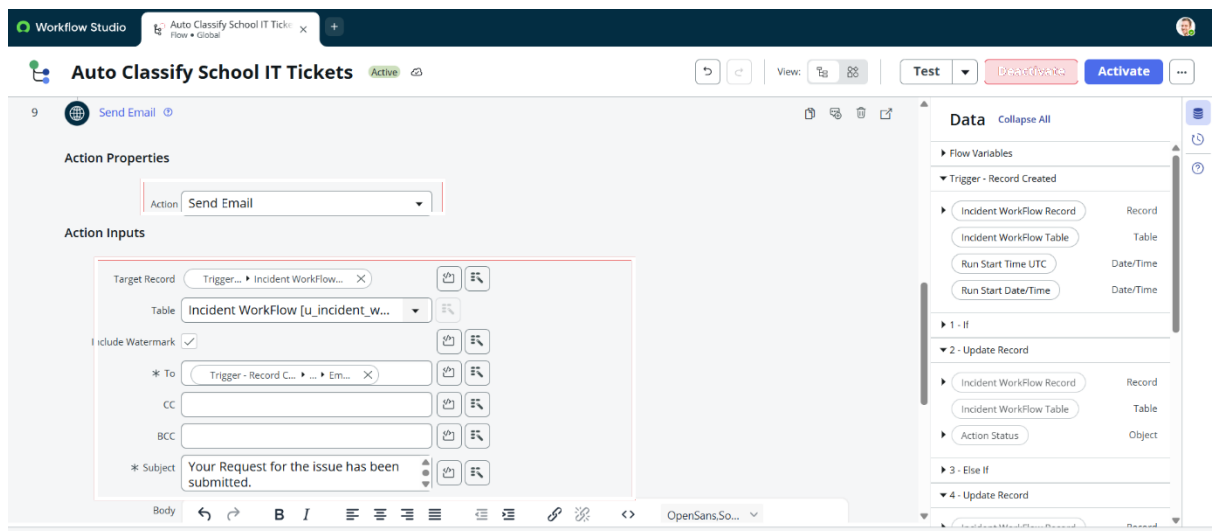

9. Forgot Password Condition Configuration

The screenshot shows the 'Auto Classify School IT Tickets' workflow in Workflow Studio. The 'ACTIONS' section is active, showing a configuration for 'SD is Forgot password'. The condition is 'SD is Forgot password'. The 'Data' panel on the right shows the flow variables: 'Incident WorkFlow Record' (Record), 'Incident WorkFlow Table' (Table), 'Run Start Time UTC' (Date/Time), and 'Run Start Date/Time' (Date/Time). The 'Done' button is highlighted with a red box.

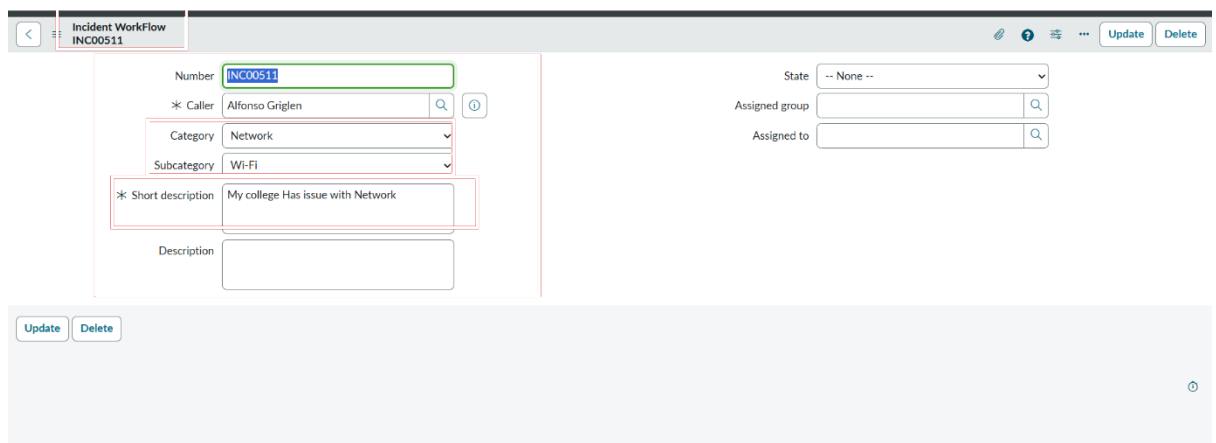

10. Update Record Action

11. Email Notification Configuration

12. Automated Classification Result

12. Known Issues

- Classification depends on predefined conditions.
- New ticket types require workflow updates.
- Incorrect ticket descriptions may affect classification accuracy.

13. Future Enhancements

- AI-Based Ticket Classification
- Machine Learning Integration
- Predictive Ticket Routing
- Advanced Reporting Dashboard
- Multi-Language Ticket Processing
- Smart Recommendation System

Conclusion

The Auto Ticket Classification Using Flow Designer project successfully automates ticket categorization and routing. It reduces manual effort, improves accuracy, and enhances the efficiency of IT support services. The implementation demonstrates how workflow automation can streamline ticket management and improve overall service quality.
