

Auto Ticket Classification Using Flow Designer

FUNCTIONAL & PERFORMANCE TESTING TEMPLATE

Model Performance Test

Date	28 September 2026
Team ID	SWTID-2026-1853
Team Leader	Vaishnavi M
Team Members	Akshaya A, Subashini R, Muthu Lekshmi U
Project Name	Auto Ticket Classification
Maximum Marks	4 marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Ticket Text Input Validation	Enter valid and invalid ticket descriptions in the input field.	Valid ticket text is accepted; invalid or empty input shows an appropriate error.	_____	_____
FT-02	Ticket Category Classification	Enter a ticket description and submit it for classification.	The system assigns the ticket to the appropriate predefined category.	_____	_____
FT-03	Multiple Ticket Classification	Provide different ticket descriptions belonging to different categories.	Each ticket is classified according to its content.	_____	_____
FT-04	Classification Model/API Connection Check	Submit a ticket and check whether the classification model/API responds.	The model/API responds successfully and returns a classification result.	_____	_____

PT-01	Response Time Test	Use a timer to check the time taken to classify a ticket.	Classification should be completed within the expected response time.	_____	_____
PT-02	Multiple Ticket Load Test	Submit multiple ticket classification requests and observe system performance.	The system should continue processing requests without significant slowdown or failure.	_____	_____
PT-03	Large Ticket Text Processing Test	Enter ticket descriptions with larger amounts of text and check processing.	The system should process the text smoothly without crashing.	_____	_____

Note:

Enter the actual result and Pass/Fail status after performing each test. The uploaded template provides the testing structure; the scenarios above are adapted to the Auto Ticket Classification project.
