

Auto Ticket Classification Using Flow Designer

PROJECT DEVELOPMENT PHASE

PERFORMANCE TEST

Date	28-09-2026
Team ID	SWTID-2026-1853
Team Leader	Vaishnavi M
Team Members	Akshaya A, Subashini R, Muthu Lekshmi U

Model Performance Testing

The project team shall fill the following information in the performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Ticket ID, Ticket Description, Predicted Category, Priority, Status, and Created Date (as available in the project dataset).
2.	Data Preprocessing	Ticket data is prepared for analysis by handling missing values, removing duplicate records where applicable, and standardizing category labels.
3.	Utilization of Filters	Filters can be used to view tickets by predicted category, priority, status, and date, depending on the fields available in the dataset.
4.	Calculation Fields Used	Calculated fields may include Total Tickets, Tickets by Category, Tickets by Priority, Pending Tickets, and Classification Accuracy (if actual labels are available).
5.	Dashboard Design	No. of visualizations / graphs: _____ Suggested visuals: ticket count by category, priority distribution, status distribution, and ticket trend over time.
6.	Story Design	No. of story points / views: _____ Story presents the ticket volume, category distribution, priority patterns, and classification outcomes.

Note:

Keep only the fields, filters, calculations, visualizations, and story views that are actually implemented in your Tableau workbook. Fill in the actual counts and attach screenshots where required.
