

Ideation Phase

Define the Problem Statements

Date	28 September 2026
Team ID	SWTID-2026-1853
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create problem statements to understand the point of view of users who create, manage, or handle support tickets. The problem statement helps the team focus on the difficulties caused by manual ticket classification and identify what needs to be improved through Flow Designer automation.

A well-articulated problem statement allows the team to understand the challenges involved in identifying the correct classification for incoming tickets. It also helps the team define a suitable Flow Designer solution that can classify tickets consistently and support the next workflow action.

The following problem statements are based on the project topic: “Auto Ticket Classification using Flow Designer”.

Problem Statement (PS)

PS	I am (Customer)	I’m trying to	But	Because	Which makes me feel
PS-1	a support agent who handles incoming tickets	classify each ticket into the correct category and route it for further processing	manual classification takes time and may be inconsistent	tickets can contain different types of requests and issues	it is difficult to process tickets quickly and consistently
PS-2	a support team member responsible for managing tickets	identify the appropriate ticket classification and workflow action	the classification process depends on manual review	the relevant ticket information must be checked before the correct workflow can be selected	I may spend additional time reviewing and routing tickets

Project Focus:

The project aims to address these problems by using Flow Designer to automate ticket classification based on the available ticket information and defined classification logic.
