

Auto Ticket Classification Using Flow Designer

Team ID: SWTID-2026-1853

Team Leader: M. Vaishnavi

Problem – Solution Fit Template

Project Name: Auto Ticket Classification Using Flow Designer

1. CUSTOMER SEGMENT(S)

- IT Support Teams
- Help Desk Teams
- Service Desk Administrators
- Organizations that handle a large number of support tickets

2. JOBS-TO-BE-DONE / PROBLEMS

- Support teams receive a large number of tickets every day.
- Manually classifying tickets takes time and effort.
- Tickets may be assigned to the wrong category or team.
- Manual classification can delay ticket resolution.
- Support staff need an easier way to categorize and route tickets.

3. TRIGGERS

- Increase in the number of support tickets.
- Repeated manual classification work.
- Delay in assigning tickets to the correct team.
- Increase in customer complaints due to delayed responses.

4. EMOTIONS: BEFORE / AFTER

- Before: Support staff may feel stressed and overloaded. Manual classification can be time-consuming and frustrating.
- After: Tickets are classified more easily. Support staff can focus on resolving issues. The ticket-handling process becomes more organized and efficient.

5. AVAILABLE SOLUTIONS

- Manual ticket classification by support staff.
- Manually assigning tickets to different teams.
- Existing ticket management systems with basic categorization.
- Limitations: Requires human effort, takes more time when ticket volume is high, and classification may be inconsistent.

6. CUSTOMER CONSTRAINTS

- Limited support staff.
- High number of incoming tickets.
- Limited time for manual classification.
- Need to work with the organization's existing ticketing system and workflow.

7. BEHAVIOUR

- Support staff receive and read incoming tickets.
- They identify the issue described in each ticket.
- They select a category and assign the ticket to the appropriate team.
- They then continue with ticket resolution.

8. CHANNELS OF BEHAVIOUR

- 8.1 ONLINE: Service desk/ticketing system, email-generated support tickets, and online support portals.
- 8.2 OFFLINE: Support team discussions, manual review of ticket details, and team coordination for ticket assignment.

9. PROBLEM ROOT CAUSE

- Large numbers of tickets require manual review.
- Ticket classification depends on human effort.
- Similar tickets may need to be repeatedly classified.
- Lack of automatic classification and routing causes delays.

10. YOUR SOLUTION

- The system uses Flow Designer to automate ticket classification.
- Incoming tickets are analyzed based on their information.
- The appropriate category can be identified automatically.
- Tickets can be routed or assigned according to the classification.
- This reduces manual work and helps make ticket management faster and more organized.
